(105 pts available)**Exam 3: Version B**  
**NO CALCULATORS.****Part I: Long Answer.***No credit for answers without sufficient justification. Use standard mathematical notation correctly.*

1. (20 points) Evaluate each of the following by hand. Write each answer as a whole number or fraction in lowest terms. *No credit for answers without all steps written out clearly.*

(a)  $\frac{821!}{820!}$

(d)  ${}_9C_2$

(b)  $\frac{7!}{7}$

(c)  $\frac{11!}{7! 4!}$

(e)  ${}_9P_2$

2. (25 points) Consider an six-sided die (with sides labeled "1," "2," ..., "6") and a four-sided die (with sides labeled "1," "2," "3," and "4"). The dice are tossed and we observe the number that comes up on each die.

(a) Write out the sample space  $S$  for this random experiment completely. Record each outcome as an ordered pair of the form  $(s, f)$  where  $s$  is the number that comes up on the six-sided die and  $f$  is the number that comes up on the four-sided die.

(b) Let  $E_1$  be the event "roll doubles or a total of six."

i. Write  $E_1$  as a set.

ii. Find  $|E_1|$ .

iii. Find  $\Pr(E_1)$ .

(c) Let  $E_2$  be the event "roll a total of twelve."

i. Write  $E_2$  as a set.

ii. Find  $|E_2|$ .

iii. Find  $\Pr(E_2)$ .

**Part II: Multiple Choice (5 points each)**

*Circle the letter of the best answer.*

3. Which of the following is not a random experiment?

- (a) drawing a card from a deck of playing cards
- (b) tossing a coin three times
- (c) selecting numbers in a lottery
- (d) rolling a pair of dice
- (e) All of these are random experiments

---

4. In the game of Bunco, three ordinary six-sided dice are rolled and the number on each die is observed. What is the size of the sample space?

- (a)  $6!$
- (b)  ${}_6C_3$
- (c)  $6^3$
- (d)  $3^6$
- (e) none of these

---

5. A person shoots 4 consecutive free throws and the total number of successes is observed. What is the size of the sample space?

- (a)  $4!$
- (b) 5
- (c)  $4^2$
- (d)  $2^4$
- (e) none of these

---

6. Johnnie's Coffee Shop offers platters consisting of a sandwich, salad, vegetable, and drink. There are eight different sandwiches, three salads, five vegetables, and ten drinks to choose from. How many different platters does Johnnie's offer?

- (a) 26
- (b) 130
- (c) 1200
- (d) 2000
- (e) none of these

7. Eight children are trick-or-treating together. In how many ways can they line up at the door to receive their treats?

- (a)  $8!$
- (b)  ${}_8 C_8$
- (c) 8
- (d)  $2^8$
- (e) none of these

---

8. Twenty contestants are entered in a Halloween costume contest. In how many ways can one choose the top four finishers regardless of order?

- (a)  ${}_{20} C_4$
- (b)  $4!$
- (c)  $20^4$
- (d)  ${}_{20} P_4$
- (e) none of these

---

9. Twenty contestants are entered in a Halloween costume contest. In how many ways can one choose Best Costume and the first-, second-, and third-runners-up?

- (a)  ${}_{20} C_4$
- (b)  $4!$
- (c)  $20^4$
- (d)  ${}_{20} P_4$
- (e) none of these

---

10. In a probability space, which of the following statements is not necessarily true?

- (a) The probability of the sample space is equal to 1.
- (b) The probability of an outcome is always between 0 and 1 (inclusive).
- (c) The probability of the impossible event is 0.
- (d) All outcomes are equally likely.
- (e) All of these statements are always true.

11. Consider the sample space  $S = \{o_1, o_2, o_3, o_4\}$ . Suppose  $\Pr(o_1) = 0.30$  and  $\Pr(o_2) = 0.50$ . If  $o_4$  is four times as likely as  $o_3$ , find  $\Pr(o_4)$ .
- (a) 0.10
  - (b) 0.16
  - (c) 0.20
  - (d) 0.40
  - (e) none of these

- 
12. An honest coin is tossed five times. What is the probability of tossing 2 heads and 3 tails?

- (a)  $\frac{{}_5P_2}{2^5}$
- (b)  $\frac{2}{2^5}$
- (c)  $\frac{{}_5C_2}{5!}$
- (d)  $\frac{{}_5C_2}{2^5}$
- (e) none of these

- 
13. In how many ways can one distribute 3 ghost costumes, 5 vampire costumes, and 2 witch costumes among ten children?

- (a)  $({}_{10}C_3) \cdot ({}_7C_5) \cdot ({}_2C_2)$
- (b)  $({}_{10}P_3) \cdot ({}_7P_5) \cdot ({}_2P_2)$
- (c)  $3! + 5! + 2!$
- (d)  $({}_{10}C_3) \cdot ({}_{10}C_5) \cdot ({}_{10}C_2)$
- (e) none of these

- 
14. How many permutations are there of the letters in the word "HALLOWEEN"?

- (a)  $({}_9P_2) \cdot ({}_7P_2) \cdot ({}_5P_5)$
- (b)  $({}_9C_2) \cdot ({}_7C_2) \cdot ({}_5C_5)$
- (c)  $({}_9C_2) \cdot ({}_7C_2) \cdot (5!)$
- (d)  $9!$
- (e) none of these
