A random group of 22 college students took a standardized aptitude test. Their scores were:

262   243   228   231   236
258   247   249   262   237
259   250   265   253   232
249   258   235   269   244
263   255

Construct a stem-and-leaf display for this data. Be sure to include a key. Summarize the important features of the numerical distribution.
